DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over:

WO 03/074611 (WO '611) and TANAKA ET AL (US 7,115,320);

in view of ULLMANN'S ENCYCLOPEDIA OF INDUSTRIAL CHEMISTRY
(ULLMANN'S).

TANAKA ET AL '320 is relied upon as an English translation of WO '611.

WO '611 discloses a polyester film suitable for packaging applications, wherein the film has an elastic modulus of 3-7 GPa, haze values of 0.1-5%, an intrinsic viscosity of up to 1.2 dl/g, heat shrinkage values as recited in claim 1, good pinhole resistance, high impact resistance, and wherein the film comprises a blend of 70-97 wt% polyethylene terephthalate and 3-30 wt% polybutylene terephthalate. The film is optionally coated with an anchor coat and/or a metal or metal oxide layer. (TANAKA ET AL '320, entire document, e.g., line 35-60, col. 2; line 40-55, col. 7; line 42-51, col. 8; line 1-7, col. 9; line 47, col. 9 to line 13, col. 10; Table 3)

ULLMANN'S discloses it is well known in the art to apply solutions of adhesion promoting compositions to films via in-line coating in order to improve adhesive properties. (section 2.4.2)

It would have been obvious to one of ordinary skill in the art at the time the invention was made to form packaging materials from the film of WO '611. It also would have been obvious to use known crosslinkable coating formulations with binders (claim 8) to form adhesion promoting coatings on said films. One of ordinary skill in the art would have adjusted the orientation and heat-setting conditions of the film to equalize and/or reduce shrinkage in both the machine and transverse directions (claims 4-5) in order to form products with improved dimensional stability at usage temperatures. Since the films in WO '611 have compositions and mechanical properties similar to those recited in the claims, the Examiner has reason to believe that the impact strength values disclosed in WO '611 (Table 3) are comparable to impact strength range recited in claim 1, therefore the Examiner has basis for shifting the burden of proof to applicant as in *In re Fitzgerald et al.*, 205 USPQ 594.
